

CLOUD DR

Part of the Cloud product family

The Service

Backup, disaster recovery and business continuity, offered through a strategic partnership with industry leader Datto, as one managed service. Your physical and virtual servers are backed up to a local appliance for fast backups with local recovery. These backups are then replicated to the Datto cloud to ensure that your data is protected in the event of any failure.

Data can be restored locally or straight from the cloud, anything from file level restores, right through to powering up your environment live on our cloud platform, giving you total peace of mind regarding your data.

In addition to this, backup data is scanned for ransomware, so in the event of an attack, you can be back up and running within minutes.

The Features

Instant onsite and offsite virtualisation

Hybrid virtualisation

Ransomware detection

End to end encryption

Screenshot backup verification

Backup insights

The Benefits

Physical and virtual platforms

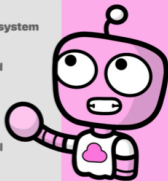

Broad operating system support

Time based cloud retention

Centralised management

Faster bare metal restores

Fully managed service
