

# NEXT GEN PROTECT

Next Gen Protect defends you against ransomware, zero-day attacks, and evolving online threats. Think of it like Antivirus on steroids.

Security threats are evolving and changing all the time. They mutate and multiply into bigger, stronger and nastier threats that many businesses struggle to cope with and recover from.

You need a solution that will not only help you respond better to these said threats, but a solution that will help you prevent, detect and recover quickly when malware or other exploits strike. Next Gen Protect allows you to roll back to your pre-attack healthy state, ensuring that you experience little to no downtime. It's business continuity at it's finest.

## Reduce Downtime

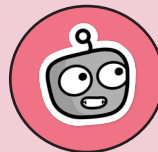

Respond to threats at the endpoint almost immediately. Continue day to day tasks with little or no risk of downtime.

## Fast Recovery

Choose your preferred recovery option after attacks—from partial recoveries to fully-automated responses.

## Automatic Rollback

Attacks are contained and compromised files are automatically replaced by known healthy version (Windows OS only).

## Key Findings

See data on threats, such as number of active threats and review threats and fixes over time.

## Features & Benefits

- ✓ Help protect against the latest threats without waiting for recurring scans or updates to signature definitions.
- ✓ Respond to threats at the endpoint almost immediately
- ✓ Policy-driven protection customised for your customer allows/blocks USBs and endpoint traffic to determine the appropriate response
- ✓ Easily determine how and when an attack started
- ✓ View summaries or detailed information about threats from a single dashboard
- ✓ Automate responses for quick threat containment
- ✓ Help remediate attacks by reversing the effects
- ✓ Rollback attacks by replacing compromised files with pre-attack healthy versions
